3 Top stories from
Government Cyber Insider this month.

Secret Service tests facial recognition for White House grounds

The goal of the project is to determine whether a facial recognition capability can be used by the Secret Service to identify "known subjects of interest prior to initial contact with law enforcement" around the White House.

DHS fine tunes cyber 'credit score' program

The Agency-Wide Adaptive Risk Enumeration algorithm is intended to help agencies prioritize mitigation activities so they can improve their basic cybersecurity hygiene.

Defense, Homeland Security team up on cyber protection

The Pentagon and the Department of Homeland Security are working together to protect critical infrastructure through information-sharing efforts with the private sector -- an effort that is new, promising and underfunded.
